## Zusammenfassung

Von 2007 bis 2011 wurden in 82 Höhlen und künstlichen Hohlräumen des Großherzogtums Luxemburg Tiere

gesammelt. Unter rund 90.000 gesammelten Tieren war 1 Exemplar der Fenstermücke *Sylvicola cinctus*.

## Abstract

From 2007 to 2011, animals were collected from 82 caves in the Grand Duchy of Luxembourg. Out of the 90,000

individuals, 1 specimen of *Sylvicola cinctus* was found.

## Résumé

Entre 2007 et 2011, 90 000 spécimens d' animaux ont été récoltés dans 82 cavités naturelles et artificielles

du Grand-Duché de Luxembourg, parmi lesquels un exemplaire de *Sylvicola cinctus*.

## 1 Results

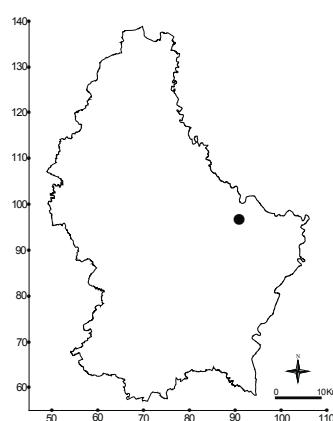

### *Sylvicola cinctus* (Fabricius, 1787)

Only one male of *Sylvicola cinctus* was caught with a net in the Äisgrott at about 30 meters distance from the entrance.

The family Anisopodidae is rather cosmopolitan, occurring in arboreal habitats ranging from tropical to cold-temperate climates. Anisopodid larvae are terrestrial saprophages living in decaying organic matter (Michelsen 1999). Some species of Anisopodidae are found in caves - *Sylvicola annuliferus* in Brazil (Pinto-da-Rocha 1993). Weber (2012) reported about some Anisopodidae in German caves, but they are not determined to species level.

*Sylvicola cinctus* itself is a widely distributed species, found in Europe, North Africa, some of the islands in Atlantic Ocean, introduced to

Hawaiian Islands (Thompson & Rogers 1992), so it's occurrence in Luxembourg could have been anticipated. Based on Fauna Europaea; this is a new addition to the fauna of Luxembourg.
